

57 GREENHILL ROAD OPHTHALMOLOGY BUILDING

Project Description

Construction of a New Multi-Level Ophthalmology Building comprising 3 levels of client tenanted occupied space as well as the necessary ground floor and basement carpark for such a development.

The building main core consisted of a new fire rated stairwell, highly detailed lift enclosure and foyer entrances. Each level was designed to incorporate its own toilet, kitchen amenities whilst the basement consisted of its own toilet, showering, storage and bike lock up facilities for all the tenants' occupying the space.

As the Base Building works neared completion Partek took a collaborative approach in conjunction with the fitout contractor and client in order to accommodate parts of the fitout works which included large extents of its own Base Building works. The project was completed on time with the upmost quality to the satisfaction of all parties in particular the client.
