

SOLITAIRE AUTOMOTIVE AUDI TERMINAL BUILDING

Project Description

The project comprised of a 1180m² single storey Audi showroom with a mezzanine floor for Solitaire Automotive.

With its striking, folded honeycomb-pattern brushed aluminium façade, the new 'Terminal Building' clearly reflects Audi's global architecture which is gaining momentum across Australia.

The lower level of the building consisted of the showroom, offices, WC and handover bay. The mezzanine housed more offices, boardroom, meeting room, staff amenities and a large open area which looked out over the showroom floor.

The components of this building which make it unique include the external aluminium cladding which is exclusive to Audi and the large curved raking walls located in the showroom which are inspired by the Nurburgring, a motorsport complex in Germany.

The project was delivered within the client requested compressed programme.
