

SEYMOUR COLLEGE EARLY LEARNING CENTRE

Project Description

The Early Learning Facility Project for Seymour College comprised of alterations of an existing building and the construction of a large extension. Construction of the building included a large civil package, structural steel, Aramax ceiling and roofing, a combination of timber and light steel framing, external grade aluminium windows & roller doors, and CFC to the facade.

The fit out comprised of lined walls & ceilings painted, joinery selections, tiling, acoustic treated walls, carpets and vinyls.

Upgrading of the school's site services were also included in this project. Partek worked with Seymour College to ensure the existing building remained in operation and the school were able to upgrade to their services without compromising their day to day activities.
